Private training / corporate training

Add the ability to create courses hidden from the wider audience. That is, the instructor can create a course that is not on the storefront and is not available via a direct link. This course is only available to a specific student or group of students as determined by the instructor.

Thus, it is necessary to give the teacher the opportunity, after creating the course, to determine who will have access to this course.

The mechanics of providing accessibility must be implemented in two ways:

During course creation.

Add a new section "Availability" next to the "Price" section. I showed here:

<https://prnt.sc/gPZO5azPSRN6> (you need to choose an icon in the general style, a "lock" icon)

- In this section there will be a choice of two possible options: "everyone's" and "selectively"
- If the instructor selects "everyone", the course availability is no different from other courses (default) as it appears now.

I showed here: <https://prnt.sc/gPZO5azPSRN6>

- But if the instructor selects the "selectively" option, 2 fields appear below for adding individual students and groups. I showed here <https://prnt.sc/nOIkC0CINxOP>
- The first field for adding students: here the instructor can add selectively any students who will see this course on the storefront and have the opportunity to enroll in this course. (Technically this process is similar to adding new instructors to the same course on your platform, I took elements from there)
- The second field allows you to add groups of students who will have access to this course on the storefront.
- The teacher can use both options at the same time. One does not contradict the other.

How are groups created?

In the left menu you need to add a section "Student groups", I showed it in detail in this screenshot: <https://prnt.sc/sHtlFstGTz9c>

This section contains a list of all created groups, as well as the "Create Group" button for creating new ones. By default, 4 columns of group characteristics are displayed for quick sorting.

If you click the "Add Group" button, the user will see this page for creating a group:

https://prnt.sc/NFW9t_9PvDqQ

The method of adding students matches the already implemented method of adding instructors (search by email)

After the group is created, it remains possible to edit the group by clicking on the button: <https://prnt.sc/Ys2bnP9LSkqK>

Clicking this button brings up a pop-up menu: <https://prnt.sc/jqlS-pqOMsH5> it has three points: Change, activate/inactivate, delete. If the group is not activated, then no rules are applied, that is, students in this group do not see the courses available to this group.

Clicking on the "Edit group" button brings up the group editing tab: <https://prnt.sc/sm6XFj9P524J>

Some third party addons:

- Move buttons "Back to course list" and "View on frontend" higher into the next block. I showed here <https://prnt.sc/nOlkC0CINxOP>
- Change the color of the forward and backward arrows, make the color match the main color of the site. I showed here <https://prnt.sc/nOlkC0CINxOP>
- Add a "Save" button at every step of creating a course, why not? This is much more convenient than scrolling to the end every time: <https://prnt.sc/Mfd8su7kZM0b>
- We would like to add the same FAQ section structure to our website: <https://creativeitem.com/docs/academy-lms/how-academy-works>
- I also need help installing an SSL certificate.
